

Level	Variables	Coding	Values	Comments
	3 pollid	2 digit ID for poll	91=NH, 92=NIC2,93=BTP02, 94=BTP04, 21=BTP07, 22=GB_Health, 23=GB_Mon, 25=GB_GE, 26=AU	
	3 country	Country of poll	1=US, 2=UK, 3=AU	
	3 mode	Online or face-to-face	1=Online, 0=FTF	
	3 t1knowlevel	Mean t1know for entire poll (T0 sample)	Phone survey (T0), not on-site at least	
	3 numitems	Number of items in knowledge index		
	2 pollgroup	4 digit ID: pollid+group no.		
	2 groupsize	No. of ppl in group		
	2 pfemale	Proportion of female in group		
	2 phighknow	Proportion of ppl above 75-percentile on t1know		
	2 phighinc	Proportion of ppl with high income (70k+ or 75k+, inc70plus=1)		
	2 pminority	Proportion non-white		
	2 phigheduc	Proportion of "BA or above" on educ (i.e., educ4=4)		
	2 meant1know	Group mean of t1know		
	2 meant2know	Group mean of T2 know		
	2 sqrtavgvar	Sqrt > Average (variance of index1, variance of index2, ...)		
	2 genvar	Generalized variance		Gaurav - Lets do s.d. so square root of whatever you get Gaurav - Construct a covar matrix b/w constituent att. Indices > Get a determinant of it > Take the nth root where n is the number of indices
	1 readbrief	Before coming to DP how much of the BM have you read it?		
	1 t1know	Knowledge Index T1		
	1 t2know	Knowledge Index T2		
	1 ppage	Age in years		Nuri - t2know (BTP04ge contains some unidentified missings)
	1 educ4	4 category education level	1=Below HS, 2=HS grad, 3=Some col, 4=BA+	

1 minority	Non-white dummy	1=Non-white, 0=White	
1 hhincome	Collapsed to 11 categories (more or less..)	1 = Less than 10,000 (~9,999) 2 = 10,000 - 19,999 3 = 20,000 - 29,999 4 = 30,000 - 39,999 5 = 40,000 - 49,999 6 = 50,000 - 59,999 7= 60,000 - 69,999 8 = 70,000 - 79,999 9 = 80,000 - 89,999 10 = 90,000 - 99,000 11 = More than 100,000	Nuri - hhincome (missings across different polls, not systematic)
1 female	Female dummy	1=Female, 0=Male	
1 attextreme	Mean distance from center (.5)		M
1 highinc	High income dummy	1=70k+ (for some polls, 75k+)	
1 t1polint	Binary scale; "very interested" = 1, else = 0		Nuri - t1polint -- couldn't find the correct raw Q for new haven and nic2.

Collapsed Or Categories	
<20k	<30k
20-40	30-60
40-60	60-100
60-100	>100
> 100k	

By the way - you can also cut them up in other ways - for example - person earning 85 can be put in the same bracket at 90. You have to have a theory of latent attribute being measured, and its relation to dependent variable. We will of course be explicit in noting such adjustments. But I don't see how it will increase bias appreciably.

	HHincome in NIC2	HHincome in BTP02 and 04	HHincome in New Haven
Unfortunately dpolls seemed to have had different raw response categories for the income question. Even the cut off points are sometimes different. e.g., See below for raw categories of income in NIC2 and BTP02. ##### We still need to standardize categorizes. We lost information - one possible way described blow. Go for 5 Categories, I would say.	1 less than 10k	1 less than \$5,000	1 Less than \$10,000
	2 exactly 10k	2 \$5,000 to \$7,499	2 \$10-20,000
	3 10-20k	3 \$7,500 to \$9,999	3 \$21-30,000
Nuri - inc70plus (also not systematic. as noted on webpage, for the btp inc70plus is actually 75k and above ppl).	4 exactly 20k	4 \$10,000 to \$12,499	4 \$31-40,000
	5 20-30k	5 \$12,500 to \$14,999	5 \$41-50,000
	6 exactly 30k	6 \$15,000 to \$19,999	6 \$51-60,000
	7 30-40k	7 \$20,000 to \$24,999	7 \$61-70,000
	8 exactly 40k	8 \$25,000 to \$29,999	8 \$71-80,000
This is basically a high income variable. You can call it something else to not shackle yourself to 70k.	9 40-50k	9 \$30,000 to \$34,999	9 \$81-90,000
	10 exactly 50k	10 \$35,000 to \$39,999	10 \$91-100,000
	11 50-60k	11 \$40,000 to \$49,999	11 More than \$100,000
	12 exactly 60k	12 \$50,000 to \$59,999	
	13 60-70k	13 \$60,000 to \$74,999	
	14 exactly 70k	14 \$75,000 to \$84,999	
	15 70-80k	15 \$85,000 to \$99,999	
	16 exactly 80k	16 \$100,000 to \$124,999	
	17 80-100k	17 \$125,000 or more	
	18 exactly 100k		
	19 more than 100k
