Study Description

From September 15 to October 30, 2007, YouGov/Polimetrix fielded a multi-wave study with a baseline and post interview as well as hosting discussion groups among respondents selected to engage in a four week deliberation experiment. To begin, 6695 baseline interviews were conducted with a nationally representative sample of PollingPoint panelists. The baseline survey measured attitudes and knowledge of democratic values and the electoral process. At the beginning of the survey, panelists were randomly assigned to the treatment or a control group. Respondents in the treatment group were invited to participate in four one hour on-line discussions on the topic of citizenship and democracy. Respondents in the primary control group were not invited but instead were identified to receive a follow-up survey six weeks later.

Of those assigned to the treatment group, 1,427 agreed to participate and provided valid home address and user information to receive the study materials. Respondents were promised \$5 for each session they attended and a tote bag if they attended all possible sessions. The mailing to the treatment group included a desktop microphone with instructions for its installation, instructions for accessing the central discussion site on the Internet, and a calendar identifying the time and day for their four weekly discussions.

From October 1 to October 25, twenty discussions were scheduled and held weekly, Monday through Thursday. In total, 771 panelists participated in the discussions, and 326 participated in all four sessions.

At the completion of the fourth discussion (Oct. 22-25), respondents in the treatment group were emailed an invitation to a follow-up survey that the control group also received. Reminders and \$2 incentives were employed to achieve the number of completes.

Sample Selection and Weighting Methodology

The initial sample was drawn from Polimetrix's PollingPoint panel. The PollingPoint panel is comprised of approximately 1.1 million members recruited by a variety of means (telephone, mail, Web advertising) to participate in surveys. The panel itself is not intended to be representative of the total U.S. population, but we select subsamples to match the intended target population.

Panelists were matched to a national sampling frame to be representative of U.S. adults aged 18 or higher. 6,695 persons completed the baseline survey and were randomly assigned to treatment (participation in online discussions) and control groups with probabilities 0.64 and 0.36, respectively. 54% of those assigned to the treatment declined to participate, leaving 1,963 participants in the treatment group, of which 1423 had computer speakers and a working sound card required to participate, and were available to participate during the scheduled times.

The primary control group was composed of 1,816 respondents and the control group with assigned readings was composed of 599 respondents. The control group that was only interviewed at the second time point was composed of 828 respondents. All three control groups were sample matched to target frames representative of the U.S. general population by

gender, race, age, education, and party identification (the target frames of 700, 200, and 300 respondents were drawn from the 2005 American Community Survey).

	Treatment (Number who completed the post survey in parentheses)	Primary Control Pre & Post	Control 2 With readings	Control 3 Post Only
Completed baseline survey	4,280	1,816	599	N/A
Agreed to participate	1,963			
Invalid information, Scheduling issues, or Technical Obstacles	540 (0)			
Attended 0 sessions	652 (127)			
Attended 1 session	210 (88)			
Attended 2 sessions	105 (72)			
Attended 3 sessions	130 (107)			
Attended 4 sessions	326 (301)			
Completed post survey	695	1,034	318	828

All control groups were weighted by age, gender, race, and education to match the U.S. adult population (using the 2005 American Community Survey for estimates of the population distributions). The weights were computed by the method of raking and symmetrically trimmed so the maximum weight was no greater than 3. The categories of the weighting variables are presented below. All treatment group members who participated in at least three deliberation sessions were weighted using the same methodology.

Categories used for weighting: Marginals from the 2005 American Community Survey were used for raking.

Gender	Male 48.3%	Female 51.7%		
Education	HS or less 46.4%	Some College 28.6%	College Graduate 16.2%	Post-Secondary 8.9%
Race	Blacks 11.0%	Hispanics 12.8%	All other 76.2%	
Age Group	18-34 30.2%	35-54 39.7%	55+ 30.1%

Beginning in the first week of October, PollingPoint will be conducting a series of on-line Internet-based discussions for the News Hour with Jim Lehrer on PBS.

[offer] {single required=1} Participants will share their opinions about citizenship and democracy in a moderated group of other PollingPoint members. You will be able to participate in these lively discussions by people simply logging into our portal, using desktop microphones that we will send you.

<1/Yes> Yes, I would like to participate

<2/No> No, I will not be able to participate.

The sessions are scheduled so as to take account of busy schedules. You could participate at various times on Mondays, Tuesdays, Wednesdays, or Thursdays. If you indicate that you wish to participate, we will provide you a list of times and days of the week to choose from.

As a token of our appreciation, you will receive \$5 for each session in which you participate, and if you participate in all 4 of the sessions you will receive a PollingPoint/News Hour with Jim Lehrer tote bag.
