

Level	Variables	Coding	Values	Comments
3	pollid	2 digit ID for poll	01=NH, 02=NIC2, 03=BTP02, 04=BTP04, 21=BTP07, 22=GB_Health, 23=GB_Mon, 25=GB_GE, 26=AU	Make the pollid 2 digit long otherwise there can be an unfortunate overlap in pollgroup for example - pollid=22, group = 2 will be same as pollid=2, group 22
	country	Country of poll	1=US, 2=UK, 3=AU	
	mode	Online or face-to-face	1=Online, 0=FTF	
	t1knowlevel	Mean t1know for entire poll (T0 sample)		
	numitems	Number of items in knowledge index		
2	pollgroup	4 digit ID: pollid+group no.		
	groupsize	No. of ppl in group		
	pfemale	Proportion of female in group		
	phighknow	Proportion of ppl above 75-percentile on t1know		
	2 phighinc	Proportion of ppl above 75-percentile on hhincome		proportion inc70plus
	pmminority	Proportion non-white		
	phigheduc	Proportion of "BA or above" on educ (i.e., educ4=4)		
	meant1know	Group mean of t1know		
	meant2know	Group mean of T2 know		
	sqrtavgvar	Sqrt of the average group-wise variance of t1 attitudes (i.e., sqrt > mean > group var of index1, group var of index2, ...)		We will need to go back to this sometime as averaging things basically means killing variance.
2	readbrief		The only variable we needed for whether participant has read briefing document or not	
				Email me why you think moderator questions are important. If you think, they are, we can include them. Just a short synopsis of why would be good.
1	t1know	Knowledge Index T1		

1 t2know	Knowledge Index T2		Nuri - t2know (BTP04ge contains some unidentified missings)
1 ppage	Age in years		
1 educ4	4 category education level	1=Below HS, 2=HS grad, 3=Some col, 4=BA+	
1 minority	Non-white dummy	1=Non-white, 0=White	
1 hhincome	11~19 category hhincome (no. of categories varies by poll)	Categories are useless - unless they are the same...	Unfortunately dpolls seemed to have had different raw response categories for the income question. Even the cut off points are sometimes different. e.g., See below for raw categories of income in NIC2 and BTP02. ##### We still need to standardize categorizes. We lost information - one possible way described blow. Go for 5 Categories, I would say. Nuri - hhincome (missings across different polls, not systematic)
1 female	Female dummy	1=Female, 0=Male	
1 inc70plus	High income dummy	1=70k+ (for some polls, 75k+, 60k+)	Nuri - inc70plus (also not systematic. as noted on webpage, for the btp inc70plus is actually 75k and above ppl). This is basically a high income variable. You can call it something else to not shackle yourself to 70k.
1 t1polint	Political interest (0~1 scale)	binary scale, "very interested" =1, else =0	t1polint -- binary scale, "very interested" =1, else =0 * Nuri - t1polint -- couldn't find the correct raw Q for new haven and nic2.
By the way - you can also cut them up in other ways - for example - person earning 85 can be put in the same bracket at 90. You have to have a theory of latent attribute being measured, and its relation to dependent variable. We will of course be explicit in noting such adjustments. But I don't see how it will increase bias appreciably.			

Topics
Discussed
earlier

I don't know what these are
doing here - I can't think how
they will have an impact

These are gone now. Didn't we
initially talk about having a
"moderator performance" group
variable? I thought this was the
case ... for some reason. Anyhow,
deleted.

HHincome in NIC2	HHincome in BTP02	HHincome in New Haven	Collapsed Or Categories	
1 less than 10k				
2 exactly 10k	1 less than \$5,000	1 Less than \$10,000	<20k	<30k
3 10-20k	2 \$5,000 to \$7,499	2 \$10-20,000	20-40	30-60
4 exactly 20k	3 \$7,500 to \$9,999	3 \$21-30,000	40-60	60-100
5 20-30k	4 \$10,000 to \$12,499	4 \$31-40,000	60-100	>100
6 exactly 30k	5 \$12,500 to \$14,999	5 \$41-50,000	> 100k	
7 30-40k	6 \$15,000 to \$19,999	6 \$51-60,000		
8 exactly 40k	7 \$20,000 to \$24,999	7 \$61-70,000		
9 40-50k	8 \$25,000 to \$29,999	8 \$71-80,000		
10 exactly 50k	9 \$30,000 to \$34,999	9 \$81-90,000		
11 50-60k	10 \$35,000 to \$39,999	10 \$91-100,000		
12 exactly 60k	11 \$40,000 to \$49,999	11 More than \$100,000		
13 60-70k	12 \$50,000 to \$59,999			
14 exactly 70k	13 \$60,000 to \$74,999			
15 70-80k	14 \$75,000 to \$84,999			
16 exactly 80k	15 \$85,000 to \$99,999			
17 80-100k	16 \$100,000 to \$124,999			
18 exactly 100k	17 \$125,000 or more			
19 more than 100k
